Create Account - User Story & Test Cases

User Story

As a new user, I want to create an account using my personal details so that I can access the platform.

Acceptance Criteria

- 1 User can register with valid details
- 2 Invalid email should show error
- 3 Mandatory fields validation
- 4 Password policy validation
- 5 Duplicate email should be rejected
- 6 System should handle boundary and security cases

Test Cases

Test Case ID: TC1001

Description: Verify successful registration

Test Data: Valid data

Expected Result: Account created

Test Case ID: TC1002

Description: Invalid email format

Test Data: user@example

Expected Result: Error shown

Test Case ID: TC1003

Description: Password too short

Test Data: 123

Expected Result: Validation error

Test Case ID: TC1004

Description: Empty mandatory fields

Test Data: None

Expected Result: Errors displayed

Test Case ID: TC1005

Description: Duplicate email

Test Data: existing@email.com

Expected Result: Duplicate error

Prompt Input -

Edit Prompt

CONTEXT:

You are a senior QA reviewer responsible for evaluating manual test cases for quality, completeness, and adherence to best practices.

The test cases are generated from a user story and must ensure high coverage, clarity, and execution readiness.

INSTRUCTIONS:

1. Carefully review each provided test case.

2. Evaluate the test case against the following quality parameters:

- Completeness: Covers all acceptance criteria, edge cases, and workflows.

- Clarity: Steps are clear, unambiguous, and executable.

- Accuracy: Expected results correctly reflect system behavior.

- Test Data Quality: Includes meaningful, realistic, and varied inputs.

- Coverage: Includes positive, negative, boundary, and edge cases.

- Consistency: Follows a uniform format and naming convention.

- Redundancy: Avoid duplicate or overlapping test cases.

- Priority Appropriateness: Priority aligns with business criticality.

3. Identify gaps, issues, or improvements needed.

4. Suggest actionable improvements for each issue.

5. Rewrite the test case with improvements applied.

OUTPUT FORMAT:

Review Summary:

- Overall Quality Rating: [Excellent / Good / Needs Improvement / Poor]

- Key Observations: [Brief summary]

Issues Identified:

{ }

Prompt Variables:

input

Prompt variables can be created with any chosen name inside curly brackets, e.g. {variable_name}

Improved Test Case:

- **Test Case ID:** [Same or improved ID]

- **Description:** [Refined description]

- **Steps:**

1. ...

2. ...

- **Expected Result:** ...

- **Test Data:** ...

- **Priority:** ...

- **Status:** ...

REVIEW GUIDELINES:

1. Ensure each step is atomic and testable.

2. Avoid vague terms like "verify", "check", or "ensure" without specifics.

3. Add missing negative or edge scenarios if applicable.

4. Improve expected results to be precise and measurable.

5. Enhance test data with boundary values and invalid inputs where relevant.

6. Maintain professional and concise language.

7. Do NOT remove intent of original test case—only improve it.

Review Summary:
- Overall Quality Rating: Needs Improvement
- Key Observations: The provided test cases cover basic scenarios but lack clarity, completeness, and consistency. They do not fully address edge cases, boundary values, or security considerations as outlined in the acceptance criteria.

Issues Identified:
1. **Lack of Specificity**: Test case steps and expected results are not detailed enough to be executable or to clearly define success criteria.
2. **Inadequate Test Data**: Test data provided is simplistic and does not cover a range of valid, invalid, boundary, or security-related inputs.
3. **Insufficient Edge Cases**: The test cases do not adequately address edge cases such as very long input fields, special characters, or non-English characters.
4. **No Clear Validation Criteria**: The test cases for password policy validation and mandatory field validation lack specific criteria for what constitutes a valid or invalid input.
5. **Duplicate Email Test Case**: The test case for duplicate email does not specify how the email is determined to be a duplicate or the exact error message expected.
6. **Security Considerations**: There are no test cases addressing potential security vulnerabilities such as SQL injection or cross-site scripting (XSS).
7. **Consistency and Redundancy**: The naming convention and format of the test cases are consistent, but there's a potential for redundancy if more detailed test cases are added without reviewing existing ones.

Suggestions for Improvement:
1. **Enhance Test Case Details**: Include specific steps for each test case, detailing user actions and system responses.
2. **Expand Test Data**: Incorporate a variety of test data, including boundary values (e.g., minimum and maximum lengths for text fields), invalid inputs (e.g., special characters in inappropriate fields), and security-related inputs (e.g., potential SQL injection strings).
3. **Define Validation Criteria**: Clearly outline what constitutes a valid or invalid input for each field, including specific password policy requirements.
4. **Address Edge Cases and Security**: Develop test cases that specifically target edge cases and potential security vulnerabilities.
5. **Refine Expected Results**: Make expected results more precise, including exact error messages or system behaviors.
6. **Review for Redundancy**: Before adding new test cases, review existing ones to avoid duplication.

### Improved Test Case:
- **Test Case ID:** TC1001
- **Description:** Successful registration with valid user details.
- **Steps:**
  1. Navigate to the registration page.
  2. Enter a valid email address.
  3. Enter a valid password that meets the password policy (e.g., at least 8 characters, including uppercase, lowercase, a number, and a special character).
  4. Enter other required personal details (e.g., name, date of birth).
  5. Submit the registration form.
- **Expected Result:** The system creates the user account, and a confirmation message is displayed. The user receives a verification email at the provided email address.
- **Test Data:**
  - Email: user@example.com
  - Password: P@ssw0rd
  - Name: John Doe
  - Date of Birth: 1990-01-01
- **Priority:** High
- **Status:** Ready for Execution

- **Test Case ID:** TC1002
- **Description:** Registration with an invalid email format.
- **Steps:**
  1. Navigate to the registration page.
  2. Enter an email address with an invalid format (e.g., user@example).
  3. Enter a valid password and other required details.
```

- **Test Case ID:** TC1002
- **Description:** Registration with an invalid email format.
- **Steps:**
  1. Navigate to the registration page.
  2. Enter an email address with an invalid format (e.g., user@example).
  3. Enter a valid password and other required details.
  4. Submit the registration form.
- **Expected Result:** The system displays an error message indicating that the email format is invalid.
- **Test Data:**
  - Email: user@example
  - Password: P@ssw0rd
  - Name: John Doe
  - Date of Birth: 1990-01-01
- **Priority:** Medium
- **Status:** Ready for Execution

- **Test Case ID:** TC1003
- **Description:** Registration with a password that is too short.
- **Steps:**
  1. Navigate to the registration page.
  2. Enter a valid email address.
  3. Enter a password that is less than the minimum required length (e.g., "123").
  4. Enter other required personal details.
  5. Submit the registration form.
```

Outputs Logs

- **Test Case ID:** TC1004
- **Description:** Registration with empty mandatory fields.
- **Steps:**
1. Navigate to the registration page.
2. Leave all mandatory fields empty.
3. Submit the registration form.
- **Expected Result:** The system displays error messages for all empty mandatory fields.
- **Test Data:** None
- **Priority:** Medium
- **Status:** Ready for Execution

- **Test Case ID:** TC1005
- **Description:** Registration with a duplicate email address.
- **Steps:**
1. Navigate to the registration page.
2. Enter an email address that is already registered in the system.
3. Enter a valid password and other required details.
4. Submit the registration form.
- **Expected Result:** The system displays an error message indicating that the email address is already in use.
- **Test Data:**
- Email: existinguser@example.com (assuming this email is already registered)
- Password: P@ssw0rd
- Name: Jane Doe
- Date of Birth: 1995-01-01
- **Priority:** High

Additional test cases should be created to address the identified gaps, especially focusing on edge cases, security vulnerabilities, and comprehensive validation criteria.
